
Reviewer uploads PDFs and selects category
Code: load admin criteria, freeze a versioned snapshot
Code: extract PDF text, hash each file, flag scanned or unreadable files
AI: extract facts per criterion with evidence quote and page, plus injection check
Code: validate JSON schema, confirm each quote exists in source text
Extraction OK?
No or low confidence
Human: fix or confirm extracted facts
Yes
Code: mandatory checks, budget and 16 week hard limits
Mandatory pass?
Fail
Pass
Flags: injection or missing data?
Yes
No
Code: weighted scoring with fixed formulas
Status: ineligible, with reason
Status: flagged, not ranked, indicative score shown
Code: rank, apply tie-break rule, build reason text from score breakdown
Reviewer screen: ranked list, per-criterion breakdown, evidence quotes
Human: confirm, override with written reason, or request clarification
Audit log: file hashes, model and prompt version, criteria version, scores, overrides, user, time
Human makes final award decision
